Complete Suite of Image Analysis Tools in One Software Package

Using imagery as a source of scientific information used to be reserved for those with extensive knowledge of remote sensing and image analysis methods. ENVI changes this paradigm by offering a complete suite of image processing and analysis tools that enable you to easily extract pertinent information from imagery without expending valuable time and effort learning advanced image analysis techniques.

AUTOMATED WORKFLOWS TO GET ANSWERS FASTER

ENVI delivers accurate, scientifically proven processes in step-by-step workflows that quickly and easily guide you through advanced image analysis tasks, regardless of your experience level. Automated workflows within ENVI take the complexity out of popular image analysis methods, while saving you time and effort in getting the accurate results you need from imagery.

Anomaly Detection search an image for statistical and spectral distinctions from the background landscape	Change Detection Look for areas of change by comparing two images from different dates using band ratio or feature index techniques
Classification classify terrain automatically or with user defined specifications	Thematic Change Perform change detection between two classification results
Feature Extraction find objects of interest using parameters based on spatial, spectral, and textural characteristics	RPC Orthorectification Correct imagery to account for terrain and sensor distortion
Image Registration improve the georeferencing of an image by tying it to an accurate base map	Viewshed Analysis Perform a line of site analysis
SPEAR Tools a set of automated workflows designed to take advantage of multispectral imagery	THOR Tools A set of automated workflows designed to take advantage of hyperspectral imagery
